

Steering the same heads at two sites: o_proj.input vs o_proj.output

Qwen1.5-14B-Chat · verse · long-form steering vector, long-form eval · 50 items/cell · top row collapses N by max, as the paper reports it

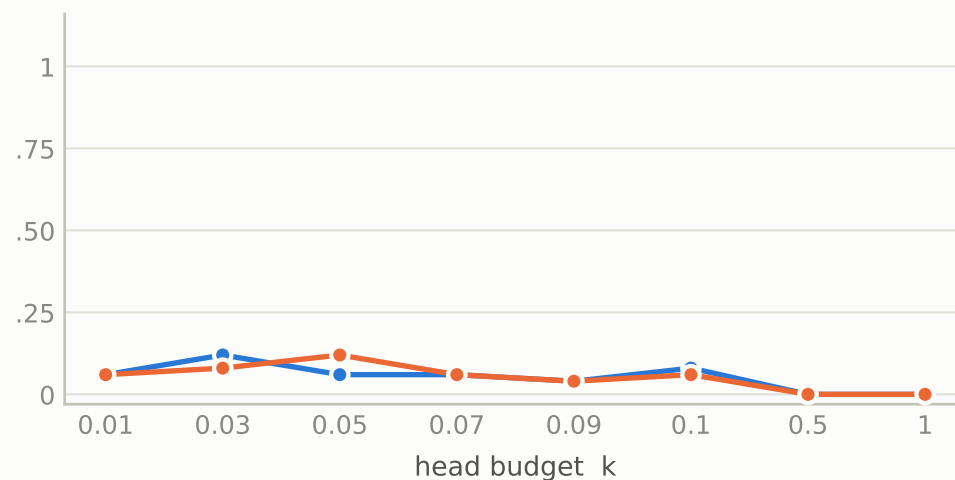

Dose is not comparable across sites: the steering vector is normalized in the space it is applied to, so a given N is a different perturbation at each site.

—●— o_proj.input (per-head z) —●— o_proj.output (W_O-mixed)
